Austin, Texas 78711-3186

Dear Mr. Perez,

There has been growing interest in the greater Houston region to replace older fleet vehicles/equipment with cleaner technologies such as low speed electric vehicles.

On behalf of the Greater Houston Clean Cities Coalition I encourage you to place Miles Electric low speed electric vehicles, and any other similar types of vehicles/equipment which reduce air pollution through the displacement of petroleum fuel usage, on the state contract. Having these vehicles/equipment on the state contract would enable many state agencies and other organizations to purchase these products with ease, thereby improving air quality and advancing our nation's energy goals. I look forward to this being accomplished for all interested parties in Texas.

Thank you for your time and consideration.
